Excellent Federal Past Performance

- The Maven Group was selected as a teaming partner to SAIC in support of the Veterans Affairs Veteran Health Information Systems Architecture (VistA) Contract providing professional services as well as transition payrolling services. Positions presently supported include Enterprise Architect, Object Oriented Developers supporting VistA Repositories, Enterprise Consultant in the role of SQA Lead, Object Oriented Application Architect, Senior Systems Engineers and System Analyst.
- The Maven Group was awarded a Prime contract with the NC National Guard. This mission critical project involved the finalization of the iPERMS database input and follow-up indexing of approximately 1.4 million pages of soldier records. This work was completed on-time and within budget.
- The Maven Group has provided mission critical staffing services for a prime vendor in support of the Armed Forces Health Longitudinal Technology Application (AHLTA) within the Defense Health Information Management System (DHIMS). This solution helps capture, manage and share health data across the Department of Defense (DoD) enterprise. Positions presently support include Senior SW Development Engineers and Systems Engineers. Some technologies used include Visual Studio 2008, Visual Basic 6, Oracle and SQL Server.
- The Maven Group has provided mission critical staffing services for a prime vendor in support of the following projects at the Centers for Medicare & Medicaid Services (CMS) ; Continuity Assessment Record and Evaluation (CARE) project ; Best Environments Supporting Success & Treatment (BESST) project ; Individual Authorized Computer Services (IACS) project ; Positions presently support include Oracle DBA's, Identity Management Engineer's and Systems Architect's. Some technologies used include Oracle, JAVA, Sun Identity Manager, XML and EDI.
- The Maven Group was selected to be a strategic resource in support of the Office of the Secretary of Defense (OSD). The Maven Group is providing high level Enterprise Resource Planning (ERP) Expert (SAP/ORACLE) Consultants at the Business Transformation Agency (BTA) to assist in the transformation of business operations across the Department of Defense (DoD).
- The Maven Group was selected to be one of only three payrolling suppliers for Northrop Grumman IS. This contract provides Northrop Grumman the advantage of allowing The Maven Group to "on-board" strategic staffing resources in a manner that controls cost for the enterprise. As a result of this relationship, Northrop Grumman is able to achieve a significant portion of their required SDVOSB spending goals.

Excellent Commercial Past Performance

- The Maven Group worked with a global tobacco company that was at the front edge of implementing SAP into their organization across 40 countries. They were looking for SAP Architect's to lead the effort in conjunction with their chosen integrator team. They had gone to numerous other companies looking for the "right" person and had no success. They ended up hiring two excellent candidates from us; One Senior FI/CO Architect and one Senior Sales & Distribution Architect. We also direct recruited a Stellent Content Management professional for this same client to support this effort.
- A global provider of software for technical computing and Model-Based Design engaged The Maven Group to assist in the search for some talented Software Engineers. The engineers support teams in the areas of GUI Design, Data Management Design, Embedded Systems Design and Application Software Design. These C++ "Mavens" had to be highly educated and talented algorithm developers. We scoured the US and to date the client has brought on two highly competent candidates we supplied.
- A worldwide manufacturer and supplier based in Georgia asked for our assistance as they grew their Information Systems staff. Over a span of 2 years we placed 9 talented candidates with this organization. Some technologies that we recruited for were; AS/400, RPG, MAPICS, ILE, JD Edwards, RF and Manufacturing Applications. These 9 candidates included both Senior SW Developers and Project Managers.
- A healthcare Global Purchasing Organization (GPO) has relied on The Maven Group for many years to support various ongoing Service Oriented Architecture (SOA) projects. We have supplied this client with upwards of 20+ both permanent staff and consulting staff with varying skill sets to include JAVA, Spring, Struts, Hibernate, Oracle Data Warehousing, Agile Methodology and Microstrategy.
- A small company, located in Iowa, reached out to The Maven Group for recruiting assistance as their company continues to grow. Challenged by a rural setting and lack of quality Information Technology candidates this client needed to add multiple candidates quickly. The Maven Group as placed multiple candidates to date to include Software Developers, Trainers and Internal Technical Support Staff. Understanding our clients' needs and challenges is an important step in our proven staffing methodology. We truly "partner" with our client and become an extension of their internal Human Resource Department.
- A leading supplier of quality aerospace research and development products, located in Virginia, engaged The Maven Group to help recruit for some difficult to find Aerospace Stress and Design Engineers. These candidates needed to have the desire to work in a truly Research & Development atmosphere and also have the design, analysis, manufacturing and testing experience our client desires. A nationwide search has resulted in one talented candidate being hired to date and this recruiting project continues.
- For an 18,000 employee non-profit healthcare system with 15 facilities throughout the East Coast, The Maven Group has become the sole staffing partner for all niche-skillset staffing needs in their Health Systems Office. The Maven Group has added key, Subject Matter Experts on the ERP/HRIS/Clinical Systems Implementation and Production Support teams including Lawson, Kronos and Siemens SMEs who were the key, missing skillsets on an extremely large and complex implementation to standardize systems from 15 disparate systems.
